Subject of Review: India's domestic consumption of soybean products has increased in the past decade, leading to large imports of soybean oil despite a high tariff. Additionally, soybean meal exports have sharply declined to accommodate this growing demand. The model-based simulations developed for this report lead to the conclusion that due to the high domestic demand for soybean products, farmers would not be adversely affected by a decrease in barriers to soybean imports.

Purpose of Review: The purpose of the review is to ensure the high-quality of the economic analysis, transparent explanation of methods, objective interpretation of results, and effective communication to the intended audience.
